结论: Dual apporach 比 projected gradient descent with inexact-line 表现差

1-1 Projected Descent

在40次迭代后达到收敛要求。

答案: -164.94922113842483

1-2 Dual apporach

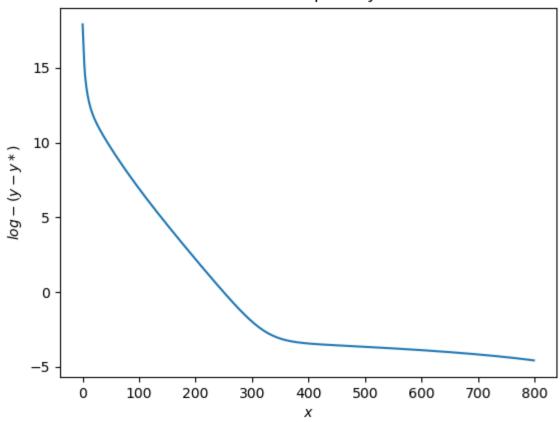

通过设置load, save保持两个问题的一致性。

在300次迭代之后达到与1-1相同的收敛要求,但是由于解决的是dual,相关精度可能不准。

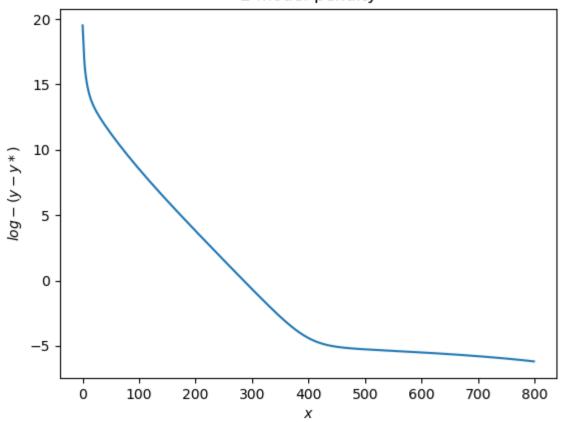

答案: -164.9492386812406

2 Penalty

设置惩罚系数0.1,在300次左右收敛速度减慢。

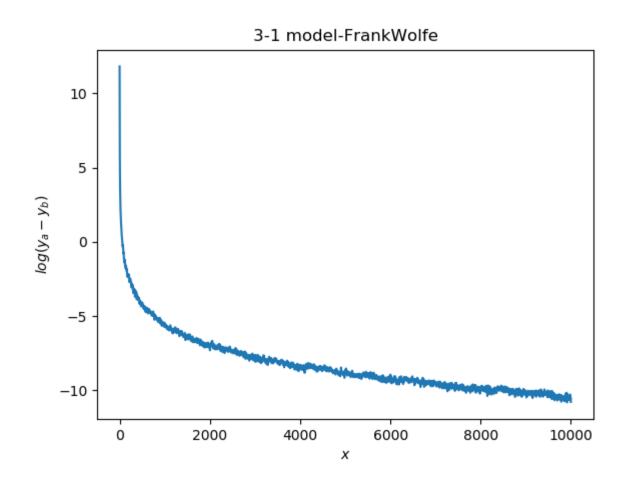

设置惩罚系数到0.2,0.4,0.5,发现收敛速度变慢的位置逐渐后移。

设置惩罚系数0.5,在400次左右收敛速度减慢。

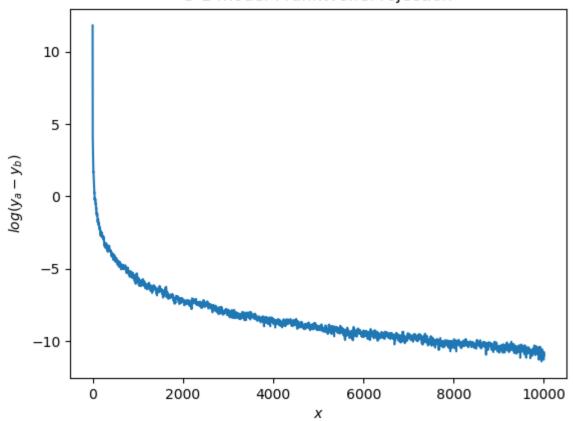

惩罚系数0.1比 0.5 好。

3

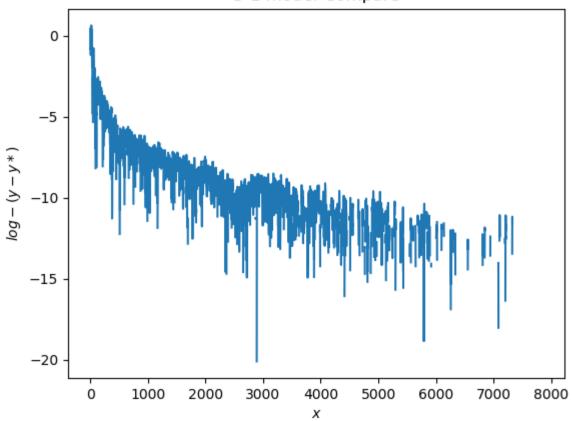

3-1 L1-norm

3-1 model-FrankWolfeProjection

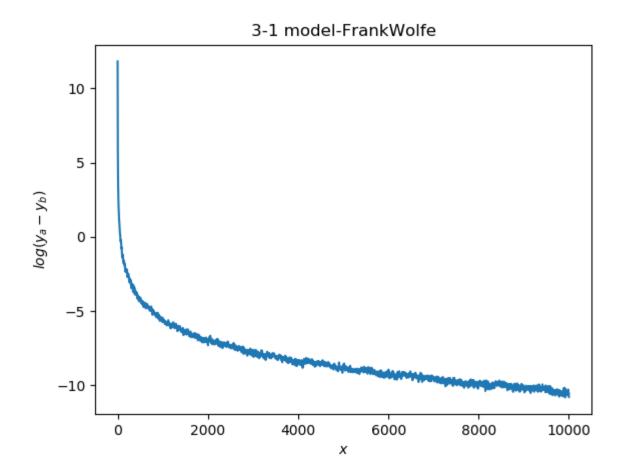

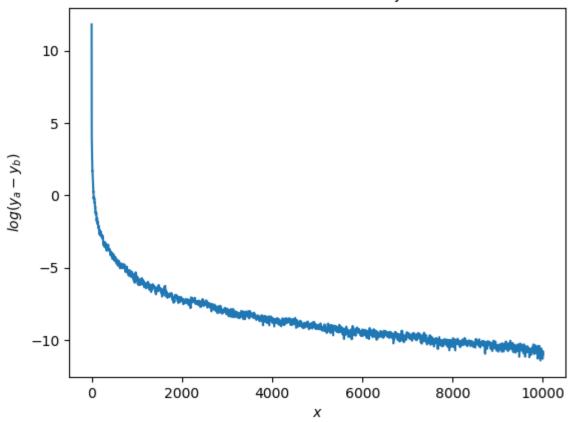

结论:前阶段,单 FrankWolfe 比 projected after FrankWolfe 表现好(单FW值更小),后阶段单FW值更大,但是差别不大。0.2056

3-2 Linf-norm

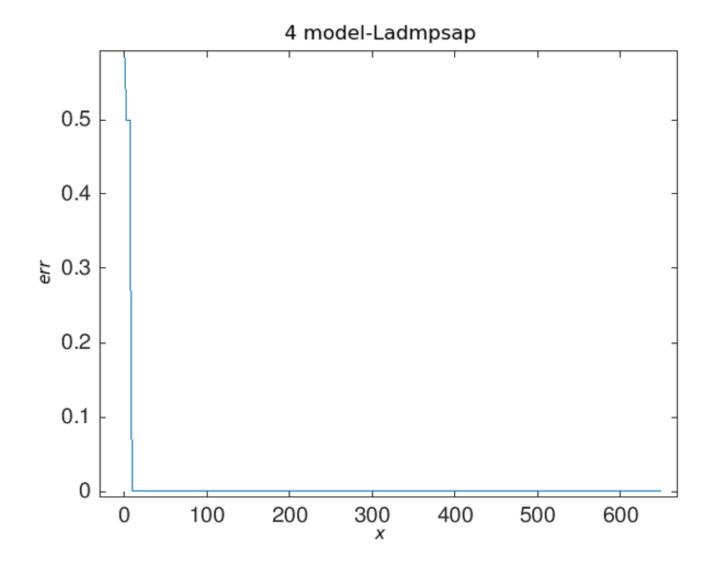

3-1 model-FrankWolfeProjection

结论: 单 FrankWolfe 比 projected after FrankWolfe 表现差, 单F更大的rate=0.685

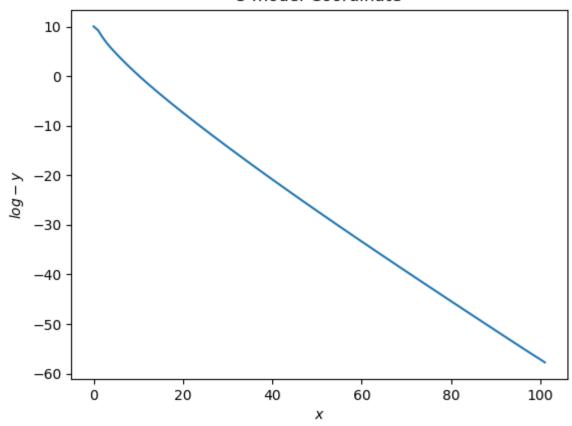

4

使用书中给出的两种收敛判定方法进行判定

5

5 model-Coordinate

最后两者的norm-l2为: 158.26
